

LESSON 6

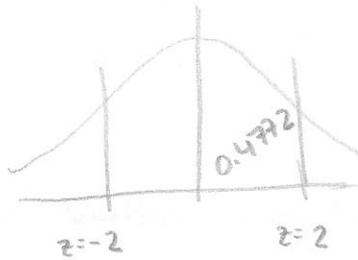

EXERCISE 1

$$n=10$$

$$\bar{X}=7$$

$$S^2=9 \rightarrow S=\sqrt{9}=3$$

$$\bar{X}-\mu=2$$

$$z = \frac{\bar{X} - \mu}{\sigma_{\bar{X}}} = \frac{2}{1} = 2$$

$$\sigma_{\bar{X}} = \frac{S}{\sqrt{n-1}} = \frac{3}{\sqrt{10-1}} = \frac{3}{3} = 1$$

$$p = 0.4772 \cdot 2 = 0.9544$$

- The probability of finding that the mean of the workers is included in the defined interval is 0.9544

EXERCISE 2

$$n=100$$

$$p = \frac{70}{100} = 0.7$$

$$\alpha=0.05 \rightarrow z=1.96$$

$$p \pm z \cdot \sqrt{\frac{p(1-p)}{n}} = 0.7 \pm 1.96 \sqrt{\frac{0.7 \cdot (1-0.7)}{100}} = 0.7 \pm 1.96 \sqrt{\frac{0.21}{100}} = 0.7 \pm 0.09 < \begin{matrix} 0.79 \\ 0.61 \end{matrix}$$

- The percentage of Andalusian that were satisfied with their lives was between 61% and 79%.

EXERCISE 3

$$n = 150$$

$$p = \frac{21}{150} = 0.14$$

$$\alpha = 0.05 \rightarrow Z_{\alpha/2} = 1.96$$

$$p \pm Z_{\alpha/2} \sqrt{\frac{p(1-p)}{n}} = 0.14 \pm 1.96 \sqrt{\frac{0.14(1-0.14)}{150}} = 0.14 \pm 0.056 \begin{matrix} < 0.196 \\ < 0.084 \end{matrix}$$

- The percentage of Spanish ex-marriages that continue having a friendly relationship is between 8.4 and 19.6%.

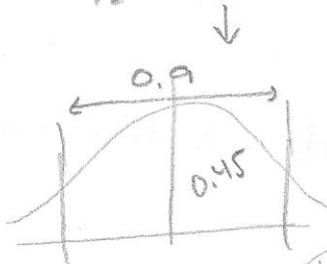

EXERCISE 4

$$n = 360$$

$$\bar{X} = 39$$

$$s^2 = 121 \rightarrow s = \sqrt{121} = 11$$

$$\alpha = 0.1 \rightarrow Z_{\alpha/2} = 1.645$$

$Z_{\alpha/2} = 1.645$ → value obtained in standardized normal table for a probability of 0.45

- Mean in stress of Spanish adults is between 38.04 and 39.96.

EX 5

$$\sigma = 8$$

$$E = 2$$

$$\alpha = 0.05 \rightarrow z_{\alpha/2} = 1.96$$

$$n = \frac{z_{\alpha/2}^2 \sigma^2}{E^2} = \frac{1.96^2 \cdot 8^2}{2^2} = 61.466 \approx 62$$

LESSON 7

LESSON 6

EX 6 (slide 7)

$$n = 50$$

$$\bar{x} = 13.5$$

$$s^2 = 25 \rightarrow s = 5$$

$$E = 1.5$$

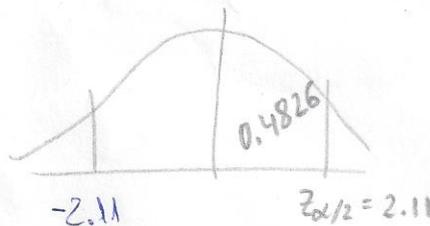

$p = ? \rightarrow$ 1º, averiguar $z_{\alpha/2}$, luego, buscar en tablas

NOTA: Cuando $\alpha = 0.05$, $z_{\alpha/2} = 1.96$ y $p = CL = 0.95$
Aquí es el camino opuesto; sabes E, no sabes ni α , ni $z_{\alpha/2}$

$$E = z_{\alpha/2} \cdot \sigma_{\bar{x}} \rightarrow 1.5 = z_{\alpha/2} \cdot 0.71 \rightarrow \frac{1.5}{0.71} = z_{\alpha/2}$$

$$\sigma_{\bar{x}} = \frac{s}{\sqrt{n-1}} = \frac{5}{\sqrt{50-1}} = 0.71$$

$$2.11 = z_{\alpha/2}$$

$$p = 0.4826 \cdot 2 = 0.9652$$

EX 7

$$p = 0.4$$

$$E = 0.03$$

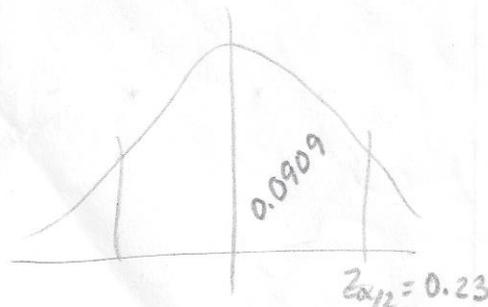

$p = ? \rightarrow$ 1º, averiguar $z_{\alpha/2}$, luego, buscar en tablas

$$n = 15$$

$$E = z_{\alpha/2} \cdot \sigma_p \rightarrow 0.03 = z_{\alpha/2} \cdot 0.13 \rightarrow \frac{0.03}{0.13} = z_{\alpha/2}$$

$$\sigma_p = \sqrt{\frac{p(1-p)}{n}} = \sqrt{\frac{0.4(1-0.4)}{15}} = 0.13$$

$$0.23 = z_{\alpha/2}$$

$$p = 0.0909 \cdot 2 = 0.1818$$
